

Amend
an alcohol and at least two inorganic acids, wherein a major component of said composition is non-aqueous.

Please add the following new claims:

Sub B
-- 82. / A composition for selectively etching a doped substance, said composition consisting essentially of:

isopropanol and at least two inorganic acids, wherein a major component of said composition is non-aqueous.

83. A composition for selectively etching a doped substance, said composition consisting essentially of:

12
propylene glycol and at least two inorganic acids, wherein a major component of said composition is non-aqueous.

84. A composition for selectively etching a doped amorphous, doped pseudo-crystalline or doped polycrystalline silicon, said composition consisting essentially of:

an alcohol and at least two inorganic acids, wherein a major component of said composition is non-aqueous.

85. A composition for selectively etching doped germanium, said composition consisting essentially of:
